

# Needle Valves (U Series)

Catalog 4110-U Revised, August 2004

## Introduction

Parker U Series Union Bonnet Valves have been engineered for use at pressures up to 6,000 (414 bar) and temperatures as high as 1,200 °F (649 °C). A non-rotating lower stem helps to extend packing life by removing rotation from the packing area. Stem packing below the threads isolates the thread lubricant from the flow, ensuring adequate lubrication regardless of the media.

#### **Features**

- Union bonnet design ensures high integrity seal under severe service applications
- Packing below the power threads protects thread lubricants from media and isolates the lubricants from the media
- Dust seal in the packing nut protects stem threads from external contamination
- Stem swivel above the packing eliminates entrapment area and increases packing life
- Choice of Grafoil® or PTFE packing
- Choice of Regulating or Blunt stem types. Blunt stem type helps combat wire draw which may occur when two phase flow is present (i.e. steam service)
- 316 stainless steel construction
- Wide variety of US Customary and SI ports
- · Panel mountable
- 100% factory tested

## **U Series Needle Valves**

#### **How to Order**

The correct part number is easily derived from the following number sequence. The six product characteristics required are coded as shown below. \*Note: If the inlet and outlet ports are the same, eliminate the outlet port designator.

Example:  $\underbrace{4Z}_{\phantom{0}} \stackrel{*}{\stackrel{}{\phantom{}}} - \underbrace{U6A}_{\phantom{0}} \stackrel{R}{\stackrel{}{\phantom{}}} - \underbrace{G}_{\phantom{0}} - \underbrace{SS}_{\phantom{0}}$
